SEQ ID NO 6 against AA and DNA
1) issued us patents and published us patent applications
2) commercial databases

FOR DNA limit to 500 nucleotides or less.

Thank you,

Brian Whiteman Remsen, 2D14 mail box 2C18 Patent Examiner - Art Unit 1635 United States Patent and Trademark Office (571) 272-0764 RE

November 2005

Published_Applications Nucleic Acid and Published_Applications Amino Acid database searches now generate two sets of results each. The Published_Applications databases have been split into two parts to reduce the amount of time required for their daily updates. This results in more machine time being available for processing searches.

- Newly published applications will appear in the Published_Applications_New databases; older published applications make up the Published_Applications_Main databases.
- Searches run against Nucleic Acid Published_Applications produce two sets of results, with the extensions .rnpbm (Published_Applications_NA_Main) and .rnpbm (Published_Applications_NA_New).

 Searches run against Amino Acid Published_Applications produce two sets of results, with the extensions .rapbm (Published_Applications_AA_New).

Protein Sequence Searches - February 2005

All of the sequence databases on ABSS have recently been updated.

- Please note that the curators of the UniProt database have purged some temporary accession numbers from the most recent version of UniProt. These sequences have been assigned new permanent accession numbers. The new UniProt record may not contain the previous temporary accession number.
- If you encounter an accession number from an older search run against UniProt (results file extension .rup) that can no longer be found in the database, the permanent record with the new accession number can be found by searching the old accession number in the UniProt Protein Archive database (UniPARC) at:

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher.

When submitting sequence search results for scanning into IFW, please include a copy of this attachment to assist any future Examiners or members of the public who may encounter UniProt temporary accession numbers.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

r treating hyperlipidemia, atherosclerosis, heart disease, or of seases associated with an imbalance of triglyceride levels. seases associated with an imbalance of triglyceride levels. aim 1; Fig 1A; 32pp; English. e enzyme acyl Coenzyme A-cholesterol acyltransferase 1 (ACAT1) recomposed acyltransferase 1 (ACAT1) recomposed acyltransferase (DGAT). The present sequence is human ACAT Related Gene Producestasis. The present sequence is human ACAT Related Gene Producestasis. The present sequence is thought therefore that recomposed cost ont esterify cholesterol. It is thought therefore that ricipates in the Coenzyme A-dependent acylation of substrate(s) and cholesterol e.g. diacylglycerol. Also, ARGP1 has a predicted acylglycerol binding motif, suggesting that it may perform the lacylglycerol binding motif, suggesting that it may perform the	-OCT-1998; 98US-00165042.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            acylation in triglyceride biosynthesis. ARGP1 gene and protein are useful for treating a subject who has an imbalance in triglyceride levels due to a defect in esterification of diglycerol, via gene therapy. Particularly, ARGP1 is useful for treating hypertriglyceridaemia, hyperlipidaemia, atherosclerosis, heart disease, obesity or other diseases associated with high or excessive levels of triglyceride

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a compound targeted to a nucleic acid molecule encoding diacylglycerol acyltransferase 1. The compound is useful for treating a disease or condition associated with diacylglycerol acyltransferase 1; modulating glucose or cholesterol levels, or lowering triglyceride levels in an animal; or for delaying the onset of a disease or condition associated with diacylglycerol acyltransferase 1 in an animal, such as abnormal lipid metabolism, abnormal cholesterol metabolism, atherosclerosis, abnormal metabolic condition, hyperlipidaemia, diabetes, type 2 diabetes, obesity, cardiovascular disease. The present sequence represents the amino acid sequence of human diacylglycerol acyltransferase 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New antisense oligonucleotides targeted to diacylglycerol acyltransferase
1, useful for treating diacylglycerol acyltransferase 1-associated

                                                                                                                                                                                                         The invention describes a compound 8 to 80 nucleobases in length targeted CC to a nucleit acid molecule encoding diacylglycerol acyltransferase 1 CC (DGAT1), where the compound specifically hybridises with the nucleic acid comolecule encoding DGAT1 comprising a sequence comprising 1976 by (SEQ ID CC NO: 4) fully defined in the specification, and inhibits the expression of DGAT1. Also, described are: inhibiting the expression of DGAT1 in cells or ctissues; sefeening for a modulator of DGAT1; a diagnostic method for CC compound above; modulating glucose levels in an animal; preventing or CC clarifying, a disease state; a kit or assay device comprising the CC compound above; modulating glucose levels in an animal; preventing or CC delaying the onset of a disease or condition associated with DGAT1 in an CC animal; modulating cholesterol levels in an animal; reducing serum CC glucose levels, DGAT1 levels in the liver, circulating insulin levels, conglucose tolerance tests and insulin tolerance tests, reducing CC circulating triglycerides, liver triglycerides or free fatty acids in the CC compound is useful in a method for treating an animal having a disease or condition associated with DGAT1, i.e., abnormal lipid metabolism, CC condition associated with DGAT1, i.e., abnormal lipid metabolism, CC condition (l.e., hyperlipidaemia), diabetes (i.e., Type 2 diabetes), observe, or cardiovascular disease, so that expression of DGAT1 is conhibited. This is the amino acid sequence of human diacylglycerol

                                                                                                  The invention discloses a composition comprising two or more isolated rat cor human polynucleotides or a polynucleotide which represents a fragment, cc derivative or allelic variation of the nucleic acid sequence. Also cc claimed are a vector comprising the novel polynucleotide, a host cell cc which is differentially regulated in an animal subjected to pain and a cc kit to perform the method, an array, a method for identifying a nucleotide sequence that is differentially expressed in neuronal tissue of a first animal cc the expression of the polynucleotide sequence the expressed in an animal subjected to pain, a method for identifying a compound which regulates the expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for pain, a method for identifying a pharmaceutical composition, a cc method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides or their antibodies. The polynucleotide given in the specification, a method for identifying a compound useful in treating composition composition composition composition composition composition or polypeptides or their antibodies. The polynucleotide or the compound that compound that segmental nerve injury (Chung), chronic constriction compile the one or more of the polypeptides or their antibodies. The polynucleotide or the compound that the polypeptides or their antibodies. The polynucleotide or the constriction compile and the polypeptides or their antibodies. The polynucleotide or the constriction constriction injury (CC1) and sparted nerve injury (SNI) in an animal (e.g. gene constriction which is differentially expressed during pain. Note: the sequence data for this patent did not form part of the printed constriction by the polypeptide or the constriction of the printed constriction in t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      14-AUG-2001;

New tumor-associated antigenic target polypeptides and nucleic useful in preparing a medicament for treating or detecting a proliferative disorder, e.g. breast, lung, colorectal, ovarian prostate cancer or tumor. o R acids,

The invention relates to human tumour-associated antigenic target (TAT) CC polypeptides, and their related mucleic acids. The TAT polypeptides are overexpressed in cancer tissues compared to normal tissues, and may thus serve as effective targets for the diagnosis and treatment of cancer in mammals. The invention also relates to nucleic acid and polypeptide sequences at least 80% identical to the TAT nucleic acids and colypeptide; expression vectors and host cells comprising a TAT nucleic acid; an antibody specific for a TAT polypeptide; a peptide or organic complexity and methods and compositions for the treatment or composition serve are useful for diagnosis of cancer in mammals. TAT polypeptides, nucleic acids and compositions are useful for diagnosis of cancer in mammals. TAT polypeptides nucleic acids cantibodies, antipodies, binding molecules and compositions are useful for diagnosing or treating a cell proliferative disorder associated with increased TAT expression, particularly cancers such as breast cancer, colorectal cancer, lung cancer, ovariah cancer, liver cancer, bladder cancer, pancreatic cancer, cervical cancer, cancers of the central nervous system, melanoma and lenkaemia. TAT nucleic acids may further be used as hybridisation probes, in chromosome and gene mapping, in chromosome identification and in gene therapy. The present sequence

CC the specification or its complement and encoding any one of the amino card sequences given in the specification; an isolated polypeptide comprising an amino acid sequence given in the specification; an isolated polypeptide comprising an amino acid sequence given in the specification; an antibody that specifically binds to the polypeptide or its antigen-binding comprising an amplified polynucleotide containing an SNP given in the specification and which is between about 16 and 1000 nucleotides in the coolynucleotide, a buffer and an enzyme; a method of detecting an SNP in a nucleic acid, comprising the coolynucleotide, a buffer and an enzyme; a method of detecting an SNP in a nucleic acid molecule; a method of detecting a variant polypeptide; and a mucleic acid molecule; a method of detecting a variant polypeptide; and a composition for identifying an agent useful in treating or preventing composition is useful in identifying an individual who has cardiant activity. The nucleic acids of the invention may be used in gene therapy. The method is useful in identifying an individual who has an increased or decreased risk for developing myocardial infarction and for preparing a composition for treating or preventing myocardial infarction. This sequence represents the protein of a human myocardial infarction. Note: This sequence was not shown in the specification. The sequence has come from the wipo website.

                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a novel method for identifying an individual who has an altered risk for developing myocardial infarction. The method comprises detecting a single nucleotide polymorphism (SNP) in any one of the nucleotide sequences given in the specification in the individual's nucleic acids, where the presence of the SNP is correlated with an altered risk for myocardial infarction in the individual. The invention further comprises: an isolated nucleic acid molecule comprising at least
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Identifying an individual who has an altered risk for developing myocardial infarction by detecting a single nucleotide polymorphism the individual's nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         20-DEC-2002; 2002US-0434178P.

```
The invention relates to a novel method for identifying an individual who CC comprises detecting a single nucleotide polymorphism (SNP) in any one of the nucleotide sequences given in the specification in the individual's CC nucleic acids, where the presence of the SNP is correlated with an CC altered risk for myocardial infarction in the individual's CC nucleic acids, where the presence of the SNP is correlated with an CC altered risk for myocardial infarction in the individual's CC contiguous nucleotides where one of the nucleotides is an SNP given in the specification; an isolated polypoptide comprising at least CC comprising an amino acid sequence given in the specification, an antibody that specifically binds to the polypoptide or its antigen-binding CC fragment; an amplified polynucleotide containing an SNP given in the specification and which is between about 16 and 1000 nucleotides in CC length; a kit for detecting an SNP in a nucleic acid molecule; a method of detecting a SNP in a nucleic acid molecule; a method of detecting a variant polypoptide; and a comprising the infarction. The novel detection method has cardiant activity. The nucleic acids of the invention may be used in gene therapy. The CC method is useful in identifying an individual who has an increased or composition for treating or preventing myocardial infarction. This compositated gene containing one or more SNP's of the invention. Note: This sequence was not shown in the specification. The sequence has come from CC sequence was not shown in the specification. The sequence has come from an electronic sequence listing downloaded from the WIPO website.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches 487;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 488

The present sequence represents an acyl-CoA:cholesterol acyltransferase (C (ACAT) related protein. The ACAT-like protein is active in the formation of a sterol, ester and/or triacylglycerol from a fatty acyl-CoA and CC sterol and/or diacylglycerol substrate. The DNA can be used for modifying CC the lipid composition of plant cells. The ACAT-like protein has CC diacylglycerol acyltransferase (DAGAT) activity, and so the synthesis of CC triglycerides can be suppressed or increased using the DNA. The protein CC may be used to produce plant oils with, a modified triglyceride content. CC me products can also be used to identify antagonists and agonists of CC DAGAT activity. Such agonists and antagonists are particularly useful in CC treating or ameliorating diseases associated with DAGAT activity. CC including diseases associated with altered cellular diacylglycerol CC cardiopulmonary diseases e.g. heart failure, atherosclerosis, and diseases associated with abnormal lipid metabolic and diseases associated with abnormal lipid metabolism, and diseases associated with abnormal lipid metabolism.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
The present sequence is that of rat acyl CoA:cholesterol acyltransferase (ACAT), as deduced from ACAT DNA (see AAA88846). Sterol O-acyltransferases such as ACAT catalyse the formation of cholesterol

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         esters from cholesterol and long chain fatty acids. Recombinant constructs of the invention are used to alter the biosynthesis and accumulation of sterols and tocopherol® in transgenic plants. Seeds of such plants may contain elevated levels of sitostanol and/or its esters, and alpha-tocopherol, and reduced levels of campesterol and campestanol and their esters. The seeds may also contain the novel sterol brassicastanol. Oil obtained from the seeds can be used in food and pharmaceutical compositions to lower levels of low density lipoprotein cholesterol in blood serum. ACAT enzymes can be used in the present invention to produce elevated levels of phytosterol and/or phytostanol

The method is useful for selecting a CC bovine having a desired DGAT1 genotypic state. It is also useful for the CC ints DGAT1 gene. Milk produced from selected bovine which is useful for CC making a dairy product provides a beneficial health effect. An antibody to the protein having DGAT1 activity is useful for inhibiting the CC cotivity of bovine DGAT1 in a lactivity is useful for inhibiting the CC generate transgenic animals which are useful to investigate the molecular DGAT1 action and to test a substance for the ability to prevent, CC basis of DGAT1 action and to test a substance for the ability to prevent, CC slow or enhance DGAT1 activity. The present sequence is bovine DGAT1

CC protein. DGAT1 gene is located on chromosome 14
                                                                                                                                                                                                                                                                                                                                                          Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   414
```

The invention relates to a method of genotyping bovine for improved milk production traits which comprises determining the diacylglycerol acyltransferase (DGAT1) genotypic state of the bovine, wherein the DGAT1 gene and polymorphisms have been found to be associated with such improved milk production traits. The method is useful for selecting a bovine having a desired DGAT1 genotypic state. It is also useful for the identification and selection of a bovine having one of the polymorphisms in its DGAT1 gene. Milk produced from selected bovine which is useful for making a dairy product provides a beneficial health effect. An antibody to the protein having DGAT1 activity is useful for inhibiting the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            activity of bovine DGAT1 in a lactating bovine so as to modulate milk production and/or milk solids content. DGAT1 nucleic acid and its fragments are useful in the farming industry. They are also useful to generate transgenic animals which are useful to investigate the molecular basis of DGAT1 action and to test a substance for the ability to prevent, slow or enhance DGAT1 activity. The present sequence is bovine DGAT1 protein mutant used to illustrate the method of the invention. Note: This sequence is not shown in the specification, however it is constructed based on the sequence SEQ.ID.NO:2 shown in the sequence listing (AAE24973)
                                                                               Acyl CoA:diacylglycerol transferase; DGAT; milk; meat marbling; low fat; polymorphic; single nucleotide polymorphism.

The present invention describes a nucleic acid molecule (NA) (I) encoding CC abovine acyl CoA-diacylglycerol transferase (DAAT) contributing to or cindicative for low fat content of milk and to low meat marbling CC (intramuscular fat content). Human DAAT is located to chromosome 8, and bovine DAAT is located to chromosome 8 and CC mammal for its predisposition for fat dontent of milk and/or its useful for testing a CC mammal for its predisposition for fat dontent of milk and/or its cencoding DAAT for nucleotide polymorphisms (e.g. single nucleotide polymorphisms (sNPs)) which are connected with the predisposition. The CC polymorphisms (sNPs)) which are connected with the predisposition of an amino CC gene and result in substitution, deletion and/or addition of an amino CC gene and result in substitution, deletion and/or addition of an amino CC gene a quanine and a cytosine which is encoded by the gene. The CC guanine, 11030 a guanine, 11048 a cytosine or thymine and 10434 of the DGAT CC gene a quanine and a cytosine residue, at position 3343 a cytosine or thymine and 1093 a cytosine or thymine and low meat marbling. The nucleid acid molecule has a the position of corresponding to position 1043 and 10434 of the DGAT gene two adenine corresponding to position 1043 and 10434 of the DGAT gene two adenine cytosine or the position for high content of milk and cytosine or the position of the DGAT gene two adenine cytosine or the position of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New nucleic acid molecule comprising a sequence of an allele of a polymorphic bovine acyl CoA-diacylglycerol transferase gene useful testing a mammal for its predisposition for fat content of milk and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ঠ
                    CC This invention relates to novel diacylglycerol O-acyltransferase CC (diglyceride acyltransferase; DGAT; EC 2.3.1.20) nucleotide and protein CC sequences. The DGAT enzyme is involved in triacylglycerol synthesis, and CC is important in higher eukaryotes for intestinal fat absorption, CC is important in higher eukaryotes for intestinal fat absorption, and CC possibly egg production and sperm maturation. The DGAT nucleotide CC sequences may be useful for identifying DGAT homologues, as a source of compose and primers, for the identification of expression patterns in CC probes and primers, for the preparation of cell or animal models of CC probes and frincerion, and for the preparation of models of CC probes and for the preparation of in vitro models of CC function. The invention may also be used for diagnostic screening, for the treatment of pathological conditions, and for treatment of conditions conclude hyperlipidaemia, cardiovascular diseases diagnosed and/or treated concer, neurological disorders and immunological disorders. DGAT may also be administrated to DGAT expression or activity. Diseases diagnosed and/or treated concer, neurological disorders and immunological disorders. DGAT may also

Transgenic animals with altered levels of DGAT can be used as sources for a variety of different food and industrial products in which the triglyceride content is specifically tailored. The invention may enable development of anti-obesity, cardiant, cytostatic or antilipaemic compounds. The present sequence is that of the mouse DGAT protein of the invention. The compound is useful for treating a disease or condition associated with diacylglycerol acyltransferase 1; modulating glucose or cholesterol levels, or lowering triglyceride levels in an animal; or for delaying the onset of a disease or condition associated with diacylglycerol acyltransferase 1 in an animal, such as abnormal lipid metabolism, abnormal cholesterol animal, such as abnormal lipid metabolism, abnormal cholesterol metabolism, atherosclerosis, abnormal metabolic condition, hyperlipidaemia, diabetes, type 2 diabetes, obesity, cardiovascular disease. The present sequence represents the amino acid sequence of mouse diacylglycerol acyltransferase 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The

```

Pred. No. 1s the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
